anchor

FILE SYNC AND SHARE
Rethink File Sync

Anchor is more than just file sync and share. It's a productivity tool with channel-grade security, backup and total business continuity. With Anchor, your end users can securely access and share files from any device wherever they go. Meanwhile, organizations can replace antiquated VPN servers while protecting their files from harmful malware and human error. Anchor allows the MSP to manage your clients through a multi-tenant, single pane of glass management portal. With Anchor, you provide your clients a HIPAA compliant file sync solution that enables the secure management of sensitive company data across any environment.

backup

FILE FOLDER BACKUP
Business-grade File Level Backup

eFolder Backup provides file-level backup of servers, NAS devices, and workstations to a local device or directly to the eFolder cloud. Company data is kept safe and secure and can be downloaded as needed. Scheduling, monitoring and reporting capabilities are instantaneous, so MSPs can rest assured that client data is safe and protected. Multi-tenant features allow MSPs to effortlessly scale their deployments and control labor costs. Altogether, Backup is a simpler, more reliable way to protect critical business data.

BACKUP AND DISASTER RECOVERY

replibit
Chain-free Reliability

eFolder Replibit is built with the MSP in mind. The industry's first chain-free, end-to-end backup and disaster recovery platform, Replibit allows MSPs to reduce labor costs by up to 75%. Replibit brings the full spectrum of everything needed to provide clients with peace-of-mind through image-based backup software, the local BDR appliance, global management of the entire solution, and cloud virtualization services in the eFolder cloud or the MSP's private cloud. With automated screenshot verification, lightning-fast recovery times, flexible deployment options, and PSA/RMM integrations (including a deep connection with ConnectWise), Replibit is the solution of choice for profit-minded MSPs that want to match a BDR solution with maximum productivity.

brc

BUSINESS RECOVERY CLOUD

BRC helps companies keep employees productive, IT systems running, and data always accessible from anywhere at any time. By using our unique cloud technology that mirrors the company's entire IT infrastructure in the cloud, you receive multiple recovery options from a single image-based snapshot of your systems. Recover data, failover servers, or virtualize the entire office with a click from a single Web-enabled interface. Companies using BRC experience a 60% reduction in overall costs related to data protection while improving their Recovery Time Objective (RTO) to just minutes.

cloudfinder

CLOUD TO CLOUD BACKUP
A Better Way to Backup the Cloud

Cloudfinder for Office 365 ensures the data present in an organization's instance of Office 365 is backed up, restorable, and protected. With Cloudfinder, all of your Office 365 data is a click away. Administrators can instantly search Office 365 data with rich filtering and select the data to restore. In addition, detailed dashboards, reports, and monitoring of all backup activities demonstrate how Cloudfinder is working to protect your Office 365 data. From a single interface, administrators can perform cross-service instant full-text searches and point-in-time restores, making data easy to find and recover.
